

Interview Questions:

1. What is the difference between the department of computer science and the department of computer, mathematical, & natural sciences at UMD?

There is no “department of computer, mathematical, & natural sciences”... that’s the name of the college.

2. Do you feel the development of AI has grown or contracted the job opportunities in the field of computer science over the last few years?

Grown. AI is everything everywhere at once.

3. Are you seeing a shift in applicants? Are less applying to computer science and more to AI?

I don’t have visibility into this.

4. What will the Master of Science in Artificial Intelligence add to the computer science program?

The MS in AI is just another educational onramp for folks who want AI but not other chunks of CS that are less relevant (i.e., operating systems, theory, etc) for those doing just applied AI work.

5. What are you most excited about in the future opportunities for UMD students in the study and field of AI?

Lots of needs to help the United States government as it applies AI, ethically and responsibly, to improve the welfare and security of the nation.
